

SOWMYA

Hello everyone,

I am excited to share my experience as a Biotechnologist, Analyst in Food & Microbiology department, Director/Manager in Food industry. I have honed my skills in managing food manufacturing operations while ensuring compliance with food safety regulations and maintaining effective employee relations

In my role, I focused on training new employees in food manufacturing processes, which involved creating structured onboarding workflows that align with company policies. This not only improved communication but also enhanced the overall client and employee experience. I actively collaborated with cross-functional teams to ensure that our production methods were efficient and adhered to the highest quality standards, including GMP and HACCP. I managed operations, coordinated teams and ensured the alignment of organizational goals with performance metrics. Developed skills highly prominent in research analysis

Prior, as a Food and Microbiology Laboratory Analyst, I performed detailed microbial testing, quality assessment, and process documentation in compliance with regulatory standards. My laboratory precision and adherence to SOPs were essential in generating a reliable outcome, which is a critical component of a research-based role. What sets me apart is my ability to integrate scientific research with customer insights and business strategy, ensuring that non-bias decisions, both scientifically sound and aligned with user and market needs

In my work as a Biotechnologist, I gained hands-on experience in experimental design, sample preparation and data interpretation, particularly in environmental science, biology and scientific research. I am comfortable understanding user needs and can communicate with respective departments. Confident as a front face, people-oriented professional. I believe in building customer relations and applying scientific methods to solve real-world problems

Thank you for viewing my cover letter. I would welcome the opportunity to discuss more about Life-Sciences, Biotechnology & Entrepreneurship and how it aligns with your team's goals.

Best regards,

Sowmya
